

ENERGY & UTILITY SKILLS SCHEME SHAPES INTERNAL HEALTH AND SAFETY TRAINING PROGRAMME

SHEA Mapped scheme saves JSM time and money and provides a flexible route to an EUSR registration.

In December 2019 JSM, a utilities service provider specialising in the delivery of integrated power and communications solutions, made the decision to use SHEA Mapped. They did this to enrich the content of their internal health and safety training so that it included all aspects of SHEA rather than some which is what they had been doing. As a result of this, they have ensured that their training programmes are at a standard recognised throughout the energy and utilities industry, giving them the confidence that their employees have the required knowledge and understanding to work safely in an operational environment.

“One of the main reasons we decided to use SHEA Mapped is because we wanted to make sure every employee who participates in our basic internal training course has a great understanding of health and safety before they attend any site. This not only benefits us as a company, but our employees and stakeholders too.”

Steve Taylor, Training Manager & SHEQ Advisor

**Workplace
Safety**

Embedding SHEA within the training JSM already carries out means the individual does not have to do an additional day's SHEA training. This enables employees to get out on site and do their job sooner, allowing the company to be more efficient and productive.

"Over 1,000 personnel from different job functions and seniority have completed our SHEA Mapped training programme, showing that everyone is benefitting from our updated health and safety training. We also like that our course now provides enough material for employees to be registered with EUSR and a flexible route to a CSCS card."

Steve Taylor, Training Manager & SHEQ Advisor

Successful completion of their SHEA Mapped course results in EUSR registration, and all the benefits that brings such as supporting a flexible and agile workforce that moves from site to site. SHEA also has a CSCS partner card status for entry onto operational sites for utilities work. This all means less time off the job for training and less cost for employers.

"With only minor changes to our internal health and safety presentations and the ease for it to be mapped to SHEA, has ensured paperwork is kept up to date. Its an easy system to use and when a new batch is required, we know it will be up to date."
